Education

Bangalore Institute of Technology, Bangalore

Sep 2025– Present

Bachelor of Technology in Information Science and Engineering

- CGPA: 8.55/10

Technical Skills

Languages & Backend: Java, C++, Python

Cloud, DevOps & Operations: GitLab, CI/CD, NGINX

AI, APIs & Frontend: LangGraph, Mem0, Qdrant, GraphQL, gRPC, WebSockets, REST APIs, React, Next.js

Core CS: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Management Systems, Computer Networks, Distributed Systems, System Design

May 10 – July 05, 2026

- Architected a FastAPI orchestrator for an Agentic AI workflow, containerizing an ML model and establishing a 5-stage GitOps CI/CD pipeline on Kubernetes via ArgoCD for end-to-end orchestration.
- Engineered migration of 5 exception calculation engines from legacy systems to modern platforms using spec-driven development with GitHub Spec.
- Optimized a real-time React/Redux platform by resolving memory leaks, improving Interaction to Next Paint (INP) by 99.1% and LCP by 49%.
- Developed a **Federated Retrieval-Augmented (RAG)** system for distributed QA.
- Integrated **Meta LLaMA 3** with healthcare datasets for high-accuracy retrieval-based generation.
- Simulated federated learning environments using **Flower AI** for decentralized data processing.

Projects

School Management System (2000+ Users)

- Built a full-stack school management platform **serving 2000+ users** supporting admissions, results, and alumni networking.
- Implemented **Redis-based OTP authentication** and real-time chat using **Socket.IO**, reducing **40%** login latency.
- Integrated an **AI chatbot** using **LangChain + Retrieval-Augmented Generation (RAG)** for automated student and alumni support.

Governance Layer for Financial Agents (AgentOps)

- Built a high-performance governance API gateway for autonomous AI agents with **sub-millisecond kill-switch** controls and real-time telemetry.
- Implemented granular permission scoping via **Open Policy Agent (OPA)** and dynamic spend caps using **Redis** in-memory evaluation.
- Engineered an autonomous AIOps remediation engine utilizing **LangGraph** and **Qdrant** vector memory.
